Ulm – a dynamic city with high quality of life in the south of Germany
Advanced Oncology is ...

understanding and studying the molecular basics of cancer development
better clinical research and international cooperation
preventing, diagnosing and treating patients with cancer and comorbidities
managing your facilities whether it is your practice, institute, ward or trialist group

Why Advanced Oncology?

International 2 year-part-time Master degree
The Master Advanced Oncology is taught in English and brings together colleagues from all over the world.

High scientific and clinical quality
Evidence-based treatment approaches according to international guidelines by leading experts in the field

Timely and locally flexible learning
The blended learning concept comprises online-learning and face-to-face seminars. It allows you to combine work, family and studies.

Unique combination of multidisciplinary contents
We help you to become better professionals by unifying the knowledge from the different subspecialties and making you better scientists, listeners and speakers

Team up internationally
Create international networks all over the world with your classmates, students from other classes, alumni, lecturers and professional colleagues
